

Compost Team

The compost team will receive keys to the compost bins.

COMPOSTING In A Community Garden

All gardeners are expected to chop their 'greens' into 1" pieces, team members will demonstrate this and help or give suggestions how best to do this, to the other gardeners. Please follow the guidelines in the document called "Materials to Compost"

You will notice that there is one bin that has a segment out of it, like a mail slot. Which ever bin has the open slot in it is the bin where you should dump the chopped greens.

The expectation for composting in our garden is to mix the brown and green into that bin. You would also make sure that the mix is turned and moist enough.

Your duties will include checking to make sure the compost in all 3 bins is moist enough. That the current bin in use has enough "Brown" added to it, so that it doesn't smell, and that Carbonatite is added during the week. You will need to be tall enough to get the pitch fork into the bin and turn the contents every couple of days. (we can try providing a milk crate to stand on.) Please sign up for this job if you are able to come to the garden at least 2 or 3 times a week.
