

Edible Landscape Garden Team

The Edible Landscape Garden is the communal plot along the south side of the garden. It is about 50' long and 5' wide. The perennial herbs are grown here. There is also space for edible flowers and extra seedling that we sometimes receive.

This team will weed and water this garden as well as plan what space there is for extra plants or to divide some plants that are getting too big. This garden is an excellent opportunity for those on the waiting list to get some experience working with a community garden member as their team captain.
